ICIF NETHERLANDS BUSINESS MISSION 2026 · CATEGORY 03

klumbayanfarm.com arif@klumbayanfarm.com +62 853 7887 0007

# Circular agriculture starts with the land.

Most circular economy work begins after a product exists: recover it, recycle it, reuse the material. In agriculture the largest circular gain sits earlier. Land already destroyed can be brought back into production, instead of clearing new forest to replace it.

**Restoring damaged land, rather than opening new land, is the circular principle applied at landscape scale.**

# We began on land a gold mine left behind.

PT Klumbayan Gold Farm was founded in Pesawaran, Lampung in 2022 with a single purpose: restore land degraded by former gold mining, and bring villagers back into professional farming through regenerative agribusiness. The company name records where that work began.

**We did not add sustainability to a trading business. We added a trading business to a restoration project.**

# Where the circularity actually is.

A spice company is not an obvious circular business, so we will be precise.

| Circular land use                                                                                                               | Residue returned to soil                                                                                                        | Verification, not assertion                                                                                                          | Value kept at origin                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Degraded and post-mining land restored into production instead of clearing forest to expand. Audited by GIZ under aGROWforests. | Composting runs at our LKC and Taman Sari motherplants, plus two communal units in Ulu Belu. Over 10 tonnes distributed so far. | Plot polygons and every transaction recorded in TAPAK, so a restoration or deforestation-free claim can be checked by a third party. | Cocoa processed into powder and nibs in Lampung rather than exported as raw beans, so processing value stays in the producing region. |

ICIF category 03, Circular Food and Agriculture, with a second fit in category 04, Bio Material and Biomass Innovation.

# A buyer asked for the pod, not the bean.

An overseas buyer travelled to Lampung, inspected our gardens and processing line, and enquired about black pepper, robusta green beans, cocoa beans and processed cocoa, and cocoa pods.

**A buyer asking for the pod is evidence that what a conventional exporter treats as a disposal cost already has a market.**

## COMPOSTING ALREADY RUNNING

LKC and Taman Sari motherplant, plus two communal units in Ulu Belu. Farmers are trained to make their own.

**10+ MT**

COMPOST DISTRIBUTED TO FARMERS

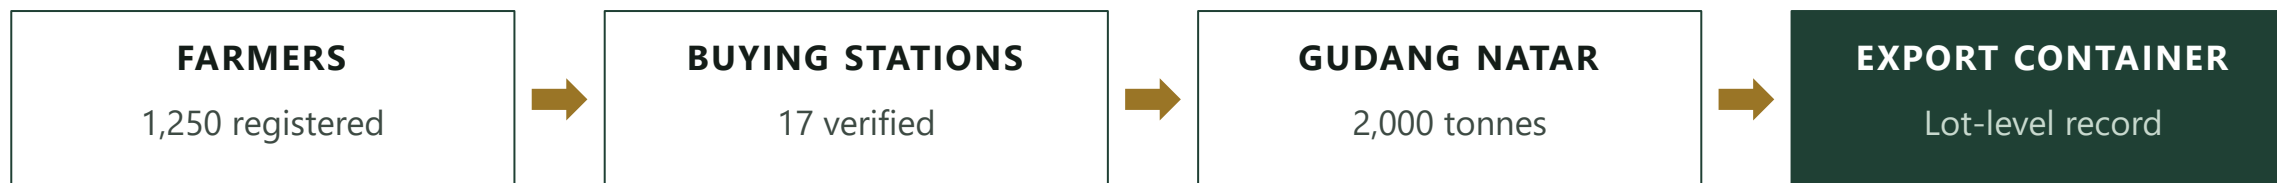

CACAO WINNOWING

DOWNSTREAM PROCESSING IN LAMPUNG

# One company from the plot to the container.

**TAPAK records farmer identity, plot coordinates, volume and receipts at every step**

## We organise the farmers

1,250 households registered, trained and bought from directly, with no collector layer in between.

## We own the middle

17 verified buying stations and our own 2,000-tonne facility, so consolidation and quality control are not outsourced.

## We record as we go

Captured at the moment of purchase, not reconstructed afterwards for an audit.

# Built and running, not proposed.

**NATAR WAREHOUSE, 2,000 T**

**CLEANING AND GRADING LINE**

**QUALITY CONTROL**

**CACAO ROASTING**

**FIELD SCHOOL**

**FARMER TRAINING**

Facilities commissioned between 2024 and 2026. Warehouse capacity 2,000 tonnes.

# TAPAK: every lot traced to a mapped plot.

## TRACEABILITY AND ACCOUNTABILITY OF PROFESSIONAL AGRICULTURE

Our own platform, live and in production use. Every purchase records farmer identity, plot polygon coordinates, volume, digital receipts and warehouse lot movement.

An investor or buyer asking which farms a container came from receives a plot-level answer, and can be granted dashboard access to verify it independently rather than taking our word for it.

TAPAK PLOT MAP, PERSONAL DATA MASKED

# Europe will require what we already built.

From the point EU deforestation rules apply, plot-level traceability stops being a differentiator and becomes a condition of market access. Suppliers who have not built it face a cost we have largely already absorbed.

## **Already exporting**

Contracted to Verstegen Spices and Sauces, Netherlands, against European quality standards.

## **Due diligence underway**

Plot polygons collected and validated with Verstegen and Fairfood for EU deforestation compliance.

## **Audited by a European buyer**

Our Natar facility is inspected against the requirements of the buyer, not against our own checklist.

**Our two closest partners, Verstegen and Fairfood, are both Dutch. Amsterdam is where this relationship already lives.**

# Already shipping to the Netherlands.

**80-100 MT**

FARMER HOUSEHOLDS

|                     |                                                                                                                                                               |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Anchor buyer</b> | Verstegen Spices and Sauces, Netherlands. Contracted with 80 per cent payment on goods ready for shipment.                                                    |
| <b>Programme</b>    | Lead local implementer of aGROWforests, funded and audited by GIZ. Its successor aGROWForests+ is conditionally awarded up to €3m by the European Commission. |
| <b>Government</b>   | The Governor of Lampung has asked us in writing to help attract investors into agricultural and plantation development. Letter of May 2025.                   |

Realised revenue figures available to qualified investors on request.

# Why we fit this delegation.

## **Export-ready**

Shipping to the Netherlands under contract today.

## **Scalable**

The plant is underused. Growth needs working capital, not new land or new machinery.

## **Sustainability-focused**

GIZ-funded land restoration, EUDR preparation, and on-site composting.

## **Investment-ready**

A written provincial mandate to attract investors, plus donor-compliance financial systems.

## **Innovation-driven**

TAPAK, our own plot-level traceability platform, live in production.

## **Open to collaboration**

Existing consortium with Verstegen, Fairfood and PT CAN.

Measured against the six participant criteria published in the ICIF prospectus.

# What a new programme would plug into.

Our current partners are references, not the limit of who we can work with. An organisation bringing a programme to Lampung does not have to build a farmer base first.

# What we are looking for in Amsterdam.

- 1 New programmes for Lampung** Not investment in KGF. New projects across commodities and forestry in the province, with us delivering them on the ground.
- 2 A European partner to apply with** Programmes like GIZ develoPPP need an applicant domiciled in the EU or OECD-DAC. We are not eligible, and do not need to be.
- 3 European buyers and distributors** Robusta coffee and processed cocoa are uncommitted. Our premium pepper is already contracted to a Dutch buyer.
- 4 Circular processing partners** Routes for coffee husk and cocoa pod husk that we could adopt in Lampung.

---

**We cannot cover the delegate fee. The next page sets out the alternative.**

# We cannot fund the seat. We can fill it.

We told the organisers plainly that the IDR 75,000,000 delegate fee is beyond us. Rather than withdraw, we set out here what a sponsored seat would actually be funding.

## **A provincial mandate, not a company trip**

The Governor of Lampung asked us in writing to help bring investment into the province.

## **An EU grant, conditionally awarded**

aGROWForests+ selected for up to €3m by the European Commission. KGF is a co-applicant.

## **A case that shows well on a stage**

Post-mining land restored into a traded, deforestation-free supply chain, with the data to show it.

## **Dutch counterparts already in place**

Verstegen and Fairfood are both Dutch. The mission deepens partnerships we already hold.

---

**What we bring instead of a fee is a case the province, the programme funder and the European buyer will each vouch for.**

# The people who run it.
